

MASSEY-HARRIS

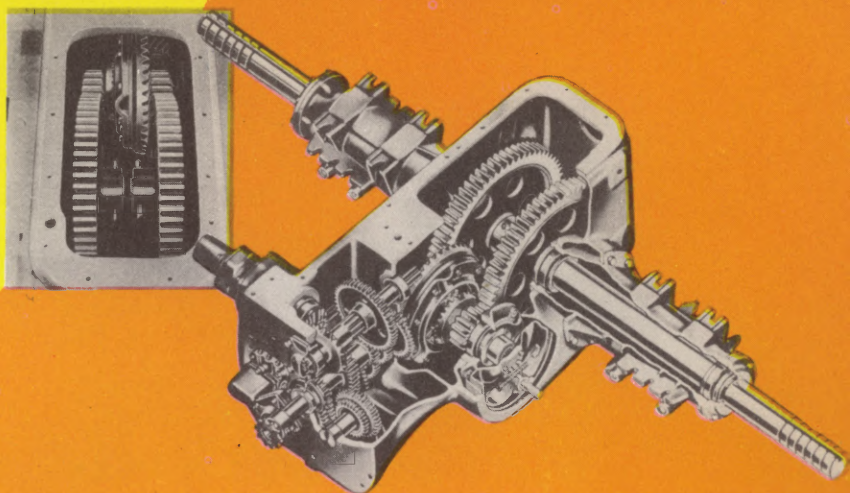

"30"

STANDARD OR ROW CROP

2-3-plow
power with 5-speed
flexibility

This is the "middle size" tractor of the Massey-Harris line, and it's the ideal tractor for "middle-size" farms. Under normal conditions, the "30" will handle a 3-bottom plow . . . and other implements with similar power demands. Has a 4-cylinder, high-compression motor with 162 cubic-inch displacement. Wide range of custom-built mounted tools. Both standard and row crop models are available with Depth-o-Matic hydraulic system.

Straight-line 5-Speed Transmission

Here's a special feature of the M-H "30" that helps to make it so economical and satisfactory. The straight-line transmission saves power, and the five forward speeds give you a "proper working speed" for every job on the farm. Standard model runs 2.19 m.p.h. in 1st, 3.06 m.p.h. in 2nd, 3.82 m.p.h. in 3rd, 5.35 m.p.h. in 4th, 10.71 m.p.h. in 5th. Row crop model runs slightly faster in all speeds.

Velvet-ride Seat for Health and Comfort

Another *very* important feature of the M-H "30" is that the operator is *not* worn to a frazzle at the end of the day. The "30" has heavy-duty irreversible steering, which makes it easy to handle in the field . . . and better still, it has the kind of seat that makes tractor driving a "joy ride". See illustration at the left. You have more energy left, for work with livestock or poultry . . . and better health in the bargain.
